Platform Prospectus

AI-Matched Tech Resume Database and Job Board

The AI-Matched Tech Resume Database and Job Board is a cutting-edge platform that seamlessly connects tech professionals with top companies through advanced AI matching.

Through this platform, AI-matching software links employers to candidates who meet job criteria and share organizational values. Streamline the process of filling your tech talent pipeline efficiently and effectively. With client portals, you can manage the entire hiring process from beginning to end. TAG Members can enjoy a 10% discount on an annual subscription.

THE PROBLEM

Extended Times to Fill Positions

*The worldwide average time required to fill a tech role is **62 days**. Specifically, it takes about **60 days** on average to hire a data scientist, whereas recruiting a senior data scientist typically takes around **70.5 days**.

Employers face challenges like talent shortages, long hiring processes, and difficulties in retaining skilled workers. Job seekers struggle with lengthy application processes and high competition, making it harder to find the right opportunity.

Prolonged Job Searches

Recent data indicates that job seekers in the tech industry may need to submit approximately **221 applications** over an average of **247 days** (about eight months) to secure a position.
